📄 APP TESTING REPORT

Application Name: Kylebag
Package Type: Standard – Full Manual Testing
Prepared by: Bytecraft Studio

---

1. Introduction

This document presents the results of **manual testing** conducted on the Kylebag application.
The purpose of this testing was to identify functional, UI, and usability issues that may impact the user experience and overall stability of the application.

All identified issues are documented clearly to help the development team understand, prioritize, and resolve them efficiently.

---

2. Test Summary

- **Testing Type:** Manual Testing
- **Application Tested:** Kylebag
- **Package:** Standard – Full Manual Testing
- **Devices Covered:** Mobile / Desktop (as applicable)
- **Total Issues Identified:** *20*

The testing focused on verifying core functionality, UI behavior, and common user flows to ensure the application performs as expected.

---

3. Test Environment

- Platform: Mobile / Web
- Testing Method: Manual Testing
- Focus Areas:
    - Functional behavior
    - UI consistency
    - Input validation

- User interaction flow

---

4. Identified Issues

Below is the list of issues identified during testing.
Each issue includes clear reproduction steps, expected behavior, actual behavior, and severity level for developer reference.

Bug Details Structure Used:

- Bug ID
- Bug Title
- Steps to Reproduce
- Expected Result
- Actual Result
- Severity (Low / Medium / High / Critical)

(Here you can paste your Excel bug rows content directly if needed)

---

5. Severity Definition

- **Critical:** Application crashes or major functionality is broken
- **High:** Core feature not working as expected
- **Medium:** Feature works partially or with issues
- **Low:** Minor UI or usability issue

---

6. Conclusion & Recommendations

Based on the testing performed, the Kylebag application contains several issues that should be addressed to improve stability, usability, and overall user experience.

It is recommended to:

- Prioritize fixing **High and Critical** severity issues first
- Perform a **retest after fixes** to confirm issue resolution
- Conduct additional testing before production release

Further testing rounds will help ensure better quality and a smoother user experience.

---

7. Closing Note

This report is prepared as part of the **Standard testing package** and is intended to support the development team with clear, developer-ready insights.

For any clarification, additional testing, or retesting after fixes, feel free to reach out.
